- 21** Designing robust Java programs with exceptions 77%  
 Martin P. Robillard , Gail C. Murphy  
ACM SIGSOFT Software Engineering Notes , Proceedings of the eighth international symposium on Foundations of software engineering for twenty-first century applications November 2000  
Volume 25 Issue 6
- 22** Genome-wide polymerase chain reaction primer design 77%  
 Hai-Hui Huang , G. E. Hedrick , Robert Burnap , Haobo Liu  
Proceedings of the 2000 ACM symposium on Applied computing 2000  
March 2000
- 23** Microsoft TerraServer 77%  
 Tom Barclay , Jim Gray , Don Slutz  
ACM SIGMOD Record , Proceedings of the 2000 ACM SIGMOD on Management of data May 2000  
Volume 29 Issue 2  
Microsoft(R) TerraServer stores aerial, satellite, and topographic images of the earth in a SQL database available via the Internet. It is the world's largest online atlas, combining eight terabytes of image data from the United States Geological Survey (USGS) and SPIN-2. Internet browsers provide intuitive spatial and text interfaces to the data. Users need no special hardware, software, or knowledge to locate and browse imagery. This paper describes

- 1**  A model for compound type changes encountered in schema evolution 87%  
Barbara Staudt Lerner  
ACM Transactions on Database Systems (TODS) March 2000  
Volume 25 Issue 1  
Schema evolution is a problem that is faced by long-lived data. When a schema changes, existing persistent data can become inaccessible unless the database system provides mechanisms to access data created with previous versions of the schema. Most existing systems that support schema evolution focus on changes local to individual types within the schema, thereby limiting the changes that the database maintainer can perform. We have developed a model of type changes involving multiple types ...
- 2**  An extension of Ukkonen's enhanced dynamic programming ASM algorithm 84%  
Hal Berghel , David Roach  
ACM Transactions on Information Systems (TOIS) January 1996  
Volume 14 Issue 1  
We describe an improvement on Ukkonen's Enhanced Dynamic Programming (EHD) approximate string-matching algorithm for unit-penalty four-edit comparisons. The new algorithm has an asymptotic complexity similar to that of Ukkonen's but is significantly faster due to a decrease in the number of array cell calculations. A 42% speedup was achieved in an application involving name comparisons. Even greater improvements are

- 1** The spatial metaphor for user interfaces: experimental tests of 100%  
 reference by location versus name  
William P. Jones , Susan T. Dumais  
ACM Transactions on Information Systems (TOIS) January 1986  
Volume 4 Issue 1  
The enduring dichotomy between spatial and symbolic modes of representation and retrieval acquires an added pragmatic dimension through recent developments in computer-based information retrieval. The standard name-based approach to object reference is now supplemented on some systems by a spatial alternative-often driven by an office or desktop metaphor. Little rigorous evidence is available, however, to support the supposition that spatial memory in itself is more effective than symbolic ...
- 2** Topic detection and tracking in English and Chinese 100%  
 Charles L. Wayne  
Proceedings of the fifth international workshop on on Information retrieval with Asian languages November 2000
- 3** Evaluating strategies and systems for content based indexing of 100%  
 person images on the Web  
Yuksel Alp Aslandogan , Clement T. Yu  
Proceedings of the 8th ACM international conference October 2000
